Subject: Re: chapter 14

Hi Ned
Designator is a laser beam transmitter used by special forces to 'designate' from several miles afar a target, by 'putting' an infra-red spot on it.
The jet fighter identify the spotted target with special filter on his helmet. He locks his weapon system on the target and releases a munition which had on its nose a sensor for infra-red which than maneuver the munition to close on the spotted target.
We, as well as other advanced armed forces established in early 90's as special unit for the operators of these designator a. Special forces unit which should adopt skills of penetrating behind enemy lines and hide themselves there for long periods and 'designate'.
It is a part of this 'stand off' battle.
Best
EB
